Keep With Operator's Manual

THIRD FUNCTION SOLENOID SELECTOR VALVE KIT

Third function valve kit can be installed using tools ordinarily available. References to right or left, forward or rearward, refer to position of operator sitting in tractor seat facing front of tractor.

WARNING: Escaping hydraulic fluid under pressure can penetrate skin causing serious injury.

- DO NOT use your hands to check for leaks. Use a piece of cardboard or paper to search for leaks.
- Stop engine and relieve pressure before connecting or disconnecting lines.
- Tighten all connections before starting engine or pressurizing lines.

If any fluid is injected into skin, obtain medical attention immediately or gangrene may result.

INSTALLING THIRD FUNCTION VALVE KIT - 2-7560 (Figure 1)

- Lower loader to ground. Level bucket and shut off tractor engine. Relieve hydraulic pressure by activating control levers several times.
- Place mounting bracket (2) over oil lines on crossmember so top valve mounting holes are toward left. Position selector valve (1) on bracket so solenoid on valve is toward right boom arm Loosen solenoid by tubing nut at end of solenoid and rotate so that electrical posts on solenoid face rear of loader crossmember.
- Attach selector valve (1) to mounting bracket (2) with solenoid positioned facing right side of loader boom as shown in Figure I. Fasten selector valve (1) to mounting bracket (2) using 1/4 x 2 cap screws (4) 1/4 lock nuts (5) spacer plate (38) and 1/4 flat washer (37).
- 4. Install 3/4 x 90° extra long elbow fitting (6) and 3/4 x 90° elbow fitting (7) into top and rear ports of selector valve (1) On top ports long elbow fitting (6) goes in left port and points toward right. On rear ports long elbow fitting (6) goes into right port and points toward left.

- Disconnect left bucket cylinder hoses from steel oil lines. Connect street tees (14) into oil lines and reconnect hoses to tees.
- 6. Connect 1/2 x 26" hose (23) and 1/2 x 24" hose (35) from selector valve rear ports to street tees (14).
- Position mounting bracket (2) and valve (1) along oil lines so 1/2 x 26" hose (23) and 1/2 x 24" hose (35) lay well. Using bracket as a template, locate and drill four 3/16" holes into top of loader crossmember.
- Fasten selector valve (1) and mounting bracket (2) to top of loader crossmember using 1/2 x 1 self tapping screws (13).
- Install 3/4 x 3/8 adapter fittings (8), dust plugs (31) and female 3/8 quick couplers (9) into front ports of selector valve.
- 10. Route wiring harness (26) from loader mountings to a 12 volt power source (either to the tractor battery or to the tractor fuse panel). Cut off excess wire. Attach fuse holder (24) to black wire using butt connector (11). Attach terminal ends (22) to opposite side of fuse holder and to the white wire on wiring harness (26). Connect terminal end on fuse holder to positive side of battery or fuse panel and terminal end on white wire to ground.
- 11. Fasten switch bracket (18) and clamp (19) to bucket control lever on tractor using #4-40 x 3/4 screws (20). Locate holder so switch (21) can be activated with ease. If lever shank is round and less than 1/2" in diameter, it will be necessary to use shorter screws (#4-40 x 5/8" (34) so screws don't protrude into switch slot area of holder.

NOTE: If switch holder will not fit because of odd shape of handle tape switch directly to control lever using a quality electrical tape good to 0° F (3M Scotch Super 33+ or Super 88).

12. Slide switch (21) into switch holder (18). Secure switch to holder using 1/4 set screw (22).

INSTALLING THIRD FUNCTION VALVE KIT- 2-7560 (Continued) (Figure 1)

- 13. Using excess wire that was cut from wiring harness (26) in step 10 above. Attach wire leads coming from switch (19) using butt connectors (11) Cut to length and attach spade terminals (32) onto wires and install plastic tabs (39) over spade terminals. Connect to wiring harness (26).
- 14. Connect wiring harness (10) to wiring harness (26) at loader mounting and secure wiring harness (10) to oil lines on loader right boom arm using plastic ties (16) Note: Do not snug ties completely because these plastic ties also secure hoses (12), which are added in a later step, to leader boom. Cut off excess wire at end of wiring harness allowing ample wire to make connection at selector valve (1).
- 15. Slide compression nut onto wiring harness (10) and thread harness through connector housing and into wiring harnes connector (12). Expose about 1 inch of individual wire and strip away 3/8" of insulation offend of wire. Connect black terminal to #1 terminal and white wire to #2 terminal of connector receptacle.
- 16. Install receptacle part of connector into connector housing so terminal #3 is adjacent to wire entrance port in housing. Tightly screw compression nut onto connector housing. Remove plastic terminal protector from selector valve. Terminals on solenoid should face back of loader crossmember. If they do not, loosen plastic nut at end of solenoid and tum solenoid slightly and retighten plastic nut. Plug connector (31) onto terminals of solenoid and secure to solenoid with screw supplied with connector (31).
- 17. Attach mounting bracket cover (3) to mounting bracket (2) using 1/4 x 1 self tapping screws (13).

- 18. Slide 90" nylon sleeve (39) over 1/2 x 90" hoses (12). Connect 1/2 x 90" hoses (12) to top ports of selector valve. Route hoses (12) with nylon sleeve (39) through plastic tie straps on loader boom arm If loader is equipped with self leveling valve go to instruction number 20.
- 19. Disconnect bucket cylinder hoses from steel oil lines at rear of loader boom arm (hoses come from valve kit on tractor or from tractor rear remotest. Connect hoses just removed from steel oil lines to 1/2 x 90" hoses (12). Install caps (15) to steel oil lines on loader boom arm. Make sure all hydraulic connections are tight.
- 20. Remove two tees and elbows at end of bucket cylinder steel oil lines where hoses from self leveling valve are connected. Reconnect hoses from self leveling valve directly onto corresponding steel oil lines (Figure I). Connect 1/2 x 90" hoses (12) to hoses from tractor rear quick couplers or control valve.
- 21. Install fuse (25) into fuse holder (24). Start tractor and check operation of joystick. Loader bucket should roll back when joystick is moved to left and attachment should clamp when joystick is moved to left with button to energize selector valve is depressed.

If bucket function is backwards, but attachment functions correctly: switch hoses where selector valve feeder hoses are connected to loader hoses. This will also result in hoses to selector valve couplers from attachment having to be switched. If both functions are backwards, only the hoses feeding the selector valve at the hoses from the tractor need to be switched.

If attachment function is only function that is backwards, switch hoses at quick couplers at selector valve 22. Install red and green identification rings (29 & 30) to third function attachment hoses and to quick couplers on selector valve.

REPAIR PARTS LIST - SELECTOR VALVE- WALVOIL DFE052/6B18ES

Item	Part No.	Description	Qty.
1	*	PLUG	1
2	53377	SPRING	1
3	*	BODY	1
4	*	SPOOL	1
5	53378	O-RING	1
6	*	TUBE	1
7	53375	BINDER COIL	1
8	53376	BINDER RETAINER	1
